

WORK IN PROGRESS

17/03/2009

We showed Jeroen a live demo of our framework. The framework is not finished completely: the request sending and handling to the WSN from the GUI, still needs some fine tuning. But the collection of the data works perfectly and the GUI can display all the data.

We discussed the future of our framework: testing different algorithms (centralized and distributed). A combination of algorithms is possible to make a system that gives the best accuracy.
