

WORK IN PROGRESS

10/03/2009

We had an oral meeting about the written WIP of 23/02/2009. We explained all the messages and our framework. We stated that the framework is almost complete: the application of the telosb needs some debugging, the parser needs to be adjusted to handle request of the GUI and the GUI needs to be expanded.

We discussed the use of an external antenna to have a better radiation pattern, which was a good idea, because the onboard antenna of the telosb isn't omnidirectional.

We discussed the progress of the bachelor student Omar, which wasn't that much work.
